

# Cyber Security as a Service (CSaaS)

DATASHEET

## Robust Reliable Cyber Security to Suit Your Budget

Today's organisations risk suffering significant financial, operational and reputational damage from cyber-attacks. With regulators proposing heavy fines and high-profile breaches causing significant PR damage to affected organisations, robust cyber security measures are essential for every organisation that wants to mitigate the risks it faces.

### What is CSaaS?

Rather than handling your cyber security in-house where you may have limited resources and expertise, Cyber Security as a Service is cybersecurity management outsourced.

With cyber security being such a key component of running an effective business and yet a highly specialist discipline, many companies struggle to find the right staff to manage this area. 51% of companies report a severe shortage of cyber security skills and retaining the kind of expertise required to manage cyber security is often challenging and expensive.

71% of customers say they would take their business elsewhere after

Our three levels of service have been expertly developed and tailored to meet a range of needs at the right price. While these service levels have been designed to align closely with your organisation's needs and maturity level, they are also customisable with the addition of different technology packages and modules.

### Reduce Risk

By employing Cyber Security as a Service (CSaaS), our clients not only reduce their risk of suffering from a cyber security incident, but also are able to demonstrate to regulators, investors, partners and their clients that they have taken appropriate measures to protect themselves and their data.

Our CSaaS wraps around your organisation providing robust shell of protection.

## Benefits of CSaaS:

- Three defined levels of service to fit your organisation's size & needs
- Customisable package depending on priorities and changing business needs
- Free-up inhouse resource and leverage our specialist teams of cyber security experts.
- Avoid extensive recruitment costs employing full time cyber security staff and demonstrate greater returns on your cyber spend
- Drive strong business performance with increased reliability of core security functions
- Protect your assets, reputation and shareholder value
- Get accurate and comprehensive reports.

51% of companies report a severe shortage of cyber security skills

## Why Choose Our CSaaS?

Our CSaaS takes away worry by mitigating the risk. Handing the baton over to us when it comes to your organisation's cyber security means greater predictability in terms of financial outlay, as well as guaranteed expertise and all-round robustness in terms of your cyber security posture. We provide you peace of mind!

## Three Levels of Security to Protect your Organisation

Our experience of delivering cyber security services is extensive. For more than 20 years we have worked with public and private sector organisations across multiple verticals providing holistic cyber security services and solutions. Using our breadth of experience, we have carefully designed a tiered service.

Our three CSaaS packages; **Essentials**, **Active** and **Advanced** are designed to meet your organisational needs.

Essentials (GDPR focussed)	Active (CE+ security conscious)	Advanced (Regulated environment)
<p><b>Service overview:</b></p> <ul style="list-style-type: none"> <li>• Aegis Maturity Platform (Reviewed against CIS top 20 control set)</li> <li>• Managed security event monitoring platform (alerts sent direct to client)</li> <li>• Key policy template documents supplied (DR/BC, Incident Response Plan)</li> <li>• Manual testing of web and external IP addresses</li> <li>• Professional Services remediation (pool of time)</li> <li>• Cyber Security Incident Response (pool of time)</li> <li>• Security Awareness Training portal</li> <li>• Cyber Essentials Self-certify ready</li> </ul>	<p><b>All 'Essentials' services, plus:</b></p> <ul style="list-style-type: none"> <li>• Consultant validated Aegis response and Risk Treatment Plan (RTP)</li> <li>• Advisory helpdesk as a Service (remote access via pool time)</li> <li>• Information Manager as a Service (remote access via pool time)</li> <li>• Policy template customisation</li> <li>• Incident analysis and reporting</li> <li>• 24x7 Proactive SIEM monitoring</li> <li>• Bi-annual Dynamic Penetration Testing (internal and external IPs)</li> <li>• Cyber Essentials + accreditation provided</li> </ul>	<p><b>All 'Active' services, plus:</b></p> <ul style="list-style-type: none"> <li>• Onsite Information Manager as a Service (min 1 day per month)</li> <li>• Tactical and Actionable strategic intelligence reporting</li> <li>• Quarterly DPT</li> <li>• Scenario Testing</li> <li>• Beyond perimeter monitoring (dark/deep web)</li> </ul>
Use Cases		
<p>Designed for clients that need a base level of cyber security but do not have internal resources or ability to fulfil this requirement themselves. Provides base level outputs around Policies and technical controls. Visibility to potential threats and breaches through reporting, call-out access to Cyber resources for mitigation and remediation activities e.g. system patching.</p>	<p>Targeted at clients that would require extra vigilance on cyber security with a client base demanding more stringent security management practices or require additional capability to meet security frameworks. Examples include client base requiring CE+ accreditation as a minimum standard.</p>	<p>For clients that need to demonstrate to regulators the high levels of care they take in protecting data and information assets. These clients place value on the ability to prevent incidents rather than just respond to them.</p>

## Our business is securing your data

As a government accredited company, we help UK organisations of all sizes build cyber security capabilities and maintain compliance through practical consulting and Managed Security Services.
