

Public Sector Cyber Security Services

DATASHEET

With over 15 years experience in providing cyber security services to Her Majesty's Government; Local Government, Central Government, blue light services, National Health Service (NHS) and others, CNS Group is an expert in protecting Public Sector data. Our award winning Managed Security Service, including Protective Monitoring, is Public Service Network (PSN) compliant. We also provide security consulting services, including the 14 Cloud Security Principles and Penetration Testing to a large number of UK Government organisations.

Accreditations

CNS Group accreditations include:

- CESSG CHECK
- CISSP
- PCI DSS
- Crest
- Tiger Scheme
- Cyber Essentials Plus
- PSN
- ISO-27001
- Crest CSIR

From the 31 October 2014, all Public Sector agencies were required to become PSN compliant to secure their networks. Our PSN services allow agencies to increase the performance and security of communications over UK administrations. Replacing the GSI (Government Secured Intranet), the PSN is based on rigorous cyber security standards and also covers G-Cloud services.

The minimum level for PSN Services is official. All our services at that level have the assurance and accreditations required. Our UK SOC is regularly audited and access is regulated for compliance and risk purposes.

Case studies

Organisations across Central Government, Local Government, NHS, police and fire services trust CNS Group's team of independent security consultants and Managed Security Services.
