

# Compliance & Certification: myISO Becoming ISO 27001 Certified

DATASHEET

## ISO/IEC 27001:2013 - Achieving Information Security with a globally recognised benchmark

Digital technology is transforming and evolving for the better and as a result so is business. As we continue to evolve digitally, so to do the surrounding threat vectors. The environment businesses now find themselves operating in is complex and often dangerous. For companies of all sizes to operate successfully, keeping ahead of the evolving information security threats is crucial.

ISO/IEC 27001:2013 (ISO 27001) is the international standard for Information Security Management Systems (ISMS). It provides the requirements for establishing, implementing, maintaining and continually improving an ISMS. This enables you to protect the confidentiality, integrity and availability of your information.

### Why we're the ISO 27001 Experts.

We have developed a flexible but detailed approach that has helped multiple organisations achieve certification. Based on our experience of working with companies of all sizes, we have an established method of implementing ISO 27001 to fit your organisation. This ensures that you successfully achieve your compliance goals on time, and on budget.

Implementation Type	Company Size (Employees)
Micro Enterprise	<50
Small Businesses	51 – 100
Medium Businesses	101 – 150
Bespoke	151

## Taking you on the Journey to ISO 27001 Compliance

Our comprehensive service package contains all the elements needed for us to get your organisation fully ISO 27001 compliant.

### Our services include:

- Creation and development of the main ISO27001 Clause 4-10 documentation.
- Support, development and guidance on an information security risk assessment
- Creation of all appropriate Annex A control documentation
- Advice and guidance on the implementation of the required Annex A controls
- Facilitation of a Management Review
- Provision of an ISO27001 internal audit conducted by a certified ISO27001 Lead Auditor
- Support in selecting an accredited certification body.

## Quick Look at ISO 27001:

- ISO 27001 is the fastest growing ISO standard in the world.
- It provides a framework for governance
- ISO 27001 Considers all areas of the business and “Is not IT”.
- ISO 27001 Demonstrates conformity with protecting information.
- ISO 27001 is likely to become a pre-requisite and not a ‘nice to have’.
- In August 2019 the new ISO27701 PIMS standard released will align to GDPR (requires ISO27001)

“We chose CNS for a number of reasons, primarily for the knowledge and experience the consultants bring, particularly of information security implementations.”

Information Security Manager, Bird and Bird

“We still get the level of control on our end that we need over our environment, so we don't have to hand everything over, but we get the unrivalled expertise from CNS.”

IT Network & Cyber Security Manager at ITN

# What Happens After We Achieve ISO 27001 Certification?

## Information Security Manager as a Service (ISMaas)

CNS understands that after implementing your ISMS and achieving certification that sometimes the complexities and subject matter expertise required to maintain your ISMS is not always available internally and where it is there maybe knowledge/experience gaps.

We have therefore put together some fixed price services that can support you each year in maintaining your ISMS, but also offer a great deal of flexibility allowing you to lean on our highly experienced & certified consultants when needed, providing you with a tailored service.

Our ISMaas is tailored towards maintaining your ISMS to accreditation standards while also providing you with a mandatory Internal Audit to give you that assurance, that when your chosen certification body returns that you will retain your certification.

The below table gives you an idea as to how this service can be used to support your ISMS.

Service	Included*	Consultancy day options*
ISMaas	1 x Internal Audit	Risk Assessments
	Consultancy days*	Risk Management/workshops
		Management review
		Training & Awareness
		CB Audit support/attendance
		Continual Improvement
		Policy Review
		RFI Questionnaire Support
		Generic Consultancy
		Additional Internal Audit

\*No. of days subject to level of ISMaas selected

## What is ISMaas?

At CNS Group we are helping multiple clients across industry to maintain secure environments. Reducing the need to go through extensive recruitment processes and outlay significant amounts of money for a permanent Information Security Manager (ISM). Our ISMaas service provides all and more of the benefits of an in-house Information Security Manager.

**Expertise:** CNS consultants are highly experienced, having worked across multiple businesses and sectors. Our experts can quickly understand the business needs and can make an immediate impact, being productive from the outset.

Our consultants work across the spectrum of strategy to project delivery and typically have a broad base of technical and commercial expertise.

**Support:** When you use our ISMaas services, you are not just accessing the expertise of one individual, our consultants can leverage the support and expertise of all CNS Group's security experts.

## Our business is securing your data

As a government accredited company, we help UK organisations of all sizes build cyber security capabilities and maintain compliance through practical consulting and Managed Security Services.
